Executive Summary

Hands-on experience with developing and validating machine learning models using SAS, SQL, and Alteryx. Successfully prepared large scalable consumer datasets, applied advanced predictive techniques, and validated model performance. Strong record of collaborating with cross-functional teams to develop practical solutions to data and modeling challenges, improve data quality, and communicate findings through storytelling to technical and non-technical stakeholders. Skilled in statistics and computing, with experience working with data from a variety of sources and environments, and a commitment to high standards of quality and integrity.

Skills

SAS · SQL · Alteryx · R · Tableau · Excel (Pivot Tables, VLOOKUP) · Python (pandas, numpy) · Advance Predictive Modeling · Time Series Analysis (ARIMA, AR/GARCH) · Machine Learning · Feature Engineering · Statistical Analysis · Data Integration & Quality Assessment · Large-Scale Data Processing · Scoring Workflows · KPI Tracking & Reporting · PII Handling & Data Compliance · Stakeholder Communication · Cross-Functional Collaboration · Data Storytelling

Work Experience

Alliant, Atlanta, GA— *Data Analyst*

Sept 2023 - Jun 2026

- Optimized SAS production programs and SQL workflows, reducing model processing time by 20% and improving operational efficiency and production reliability.
- Owned the end-to-end development of a response model, including data preparation, feature engineering, model development, statistical validation, and production deployment, reducing a 24-million-record dataset to 13 million high-quality unique records for model preparation.
- Delivered large-scale scoring files to clients through an internal big-data transfer tool (THOR), supporting timely and accurate data delivery.
- Managed data preparation within the team's quarterly production pipeline of 40-50 predictive models, including pre-matching and appending of survey data to build model-ready datasets.
- Developed and validated predictive analytics solutions using SAS and SQL, applying logistic regression to consumer behavior, demographic, and cognitive psychology data to build model-ready datasets. Collaborated with cross-functional teams on data preparation, model development, and scoring and extraction processes, producing technical documentation and presenting KS-validated performance results to stakeholders.

Georgia State University, Atlanta, GA— *Graduate Research Assistant*

Aug 2022 - Dec 2023

AVGroup Aviation and Aerospace – Quote Success Analysis & Visualization

- Led an industry-sponsored analytics project that leveraged Tableau and Excel to identify opportunities for improving inventory utilization, demand forecasting, and business performance. Delivered executive-ready insights and recommendations that supported strategic planning and operational decision-making.

Stock Price Risk Estimation

- Collaborated with a student analytics team to develop and evaluate stock price forecasting models using time series and machine learning techniques (ARIMA, AR/GARCH). Applied statistical metrics (MSE, MAE, RMSE) to assess model performance and generated insights from monthly log returns to support financial risk analysis and portfolio decision-making.

Education

Georgia State University, Atlanta, GA — *Master of Science in Data Science and Analytics*

Aug. 2022 - Dec. 2023

Kennesaw State University, Kennesaw, GA — *Bachelor of Science in Psychology, minor in Data Science and Analytics*

Aug 2016 - Dec. 2021
